Final Test

At the end of this course you are required to take a comprehensive test composed of 35 quiz questions, five (5) from each of the modules in the course. Of the five (5) questions for each module, two (2) require some calculation to determine the value of a financial variable.

You have **one (1) attempt** and must complete the test in **ninety (90) minutes**. You are expected to finish the attempt and submit your answers in one sitting.

The goal of the Final Test is to assess your understanding of basic financial principles, your commitment to studying, and your overall preparedness to complete the MScFE program. All questions are related to topics covered in the weekly Modules, including the use of spreadsheets made available in several Lesson Notes. Therefore, you must carefully read and master all course materials, and complete all assignments prior to taking the test.

The Final Test will be available starting on Day 43 of the course.

The deadline to submit the Final Test is Day 54 of the course.

The Final Test has 300 points, making up 30% of the total course grade. Check the Points Distribution table in the [Course Syllabus](#) to view the points and grades earned upon completion of all course activities.
